1895.

GREETING.

IN SENDING out this, our sixth, annual plant catalogue and price list of fruit plants we wish *first* to thank our patrons in all sections of the United States (and parts adjacent) for their very *liberal patronage* and *many kind words*. Both are gratefully appreciated. By just and fair dealing we shall continue to solicit your patronage and trust that our future dealings may be mutually pleasant.

OUR LOCATION. As this catalogue will go into the hands of many new inquirers we would say that we are situated in the "Great Fruit Belt" of southwestern Michigan, nearly opposite Chicago, one and one-half miles from Lake Michigan. This is a justly celebrated fruit section. The Chicago Journal, of Oct. 8, says: "A conservative estimate places the amount of fruit of different kinds set down in Chicago *every day* since Aug. 1st, by a single steamship line, from Michigan, at 550 tons; from June 1st to Aug. 1st, at least 120 tons a day were received by the same line. Estimating the season through, the great amount of 92,400 tons were received, 26,200 tons being strawberries, raspberries and blackberries. A large share of this great amount came from St. Joseph, Benton Harbor and vicinity," in this county. Notwithstanding the great amount shipped, prices have averaged good and the thrifty fruit farmer has reason to congratulate himself that he grew strawberries at an average price of \$3 *per bushel* instead of wheat at 50 cents. When it is understood that strawberries can be grown as cheaply as wheat, bushel for bushel, is it to be wondered at that so many people are anxious to grow fruit.

OUR TRADE was very much larger the past season than ever before, consequently we have been obliged to buy two more pieces of land and have set out many acres of it to fruit, *for plants*, and have much the largest stock that we have ever grown.

OUR STOCK is *first-class*. Hundreds of *unsolicited* testimonials are received, a few of which we publish to show how others regard our stock.

VARIETIES. We have as long a list of the best varieties as are needed to start, successfully *any one* in the fruit business, or to supply dealers or nurseries with stock to sell again, which we do every year in large quantities.

OUR PRICES will be found to be only about *one-half* as high, on many varieties, as most of the dealers in the country. Many that buy in large quantities to sell again pronounce it A No. 1, "best every received," etc., (see testimonials.) One reason that we can sell such *fine stock* so *low* is that we have our own *packing moss* on our own *premises*. The matter of *moss* may seem a small item to some but when it is understood that we use *many tons* every spring, for packing alone, it will be seen that it is quite an item. Another good reason is, we are satisfied with a *smaller profit*.

BOXING AND PACKING. We use light, strong boxes and handled baskets for express and heavier ones for freight and pack in *moss*, in

the *best manner*, for which we make no charge. While we cannot now claim to do *all* of the packing ourself, as some do, we *do* claim that it is done under our own supervision or of some member of our family. We employ the same packers year after year and they are very careful.

METHODS OF SHIPMENT. *By Mail.* The reduction in postage on plants enables us to send small amounts to distant sections at small cost and thus place in customers hands, a few of a kind, *cheaper* than they could procure them of their nearest Nursery. *By Express.* This is the method most commonly adopted for sending large bills to distant parts of the country as there is no delay as sometimes occurs by freight. Plants go for 20 per cent. less by express than other goods. *By Freight.* We ship large amounts of stock long distances by fast freight. Nearly all of the plants bought of us by nurseries and dealers all over the United States to sell again are ordered sent *by freight*. All such should be ordered *early*. Many ask "how far can you ship by freight." We have shipped safely as far west as the Pacific and east to the Atlantic and into the mountains of Colorado. We send large bills by freight every year into New York, Pennsylvania, Ohio, Iowa, Wisconsin, and many other States, and most go through safely, but of course delay *sometimes* occurs and stock is injured. As the *buyer* is the one benefited by *freight rates* he must take the risk. It is immaterial to us which way we ship.

WHEN TO ORDER. *Early* by all means—the *earlier* the better. If anything more is needed it can be added later; besides we give *liberal discounts* on *early* as well as *large* orders. If not prepared to send *all* of the money send a part, when the order will be booked; the balance *before* shipment. *By early* orders we do not mean *spring* but *winter* orders. Many of our old customers appreciate the benefits of ordering early and we now have many orders booked at this writing (Dec. 3) for spring shipment. *Again* we say *do not* put off ordering until late, and then send in an order saying, "My ground is all ready—ship my stock at once," etc. Doubtless there will be hundreds of orders ahead of yours that must be attended to.

OUR TERMS ARE CASH. No order booked unless accompanied by a remittance as a guarantee of good faith—the balance *before shipment*. *At our prices we cannot afford to do a credit business.* We give references as to our reliability, etc., which all are at liberty to investigate.

LIABILITY. While we take the greatest pains to have our stock *pure and unmixed*, and *true to name*, mistakes will sometimes occur and if found to be our fault we will either replace stock not found true or refund the money. In no case is our liability to be greater than amount paid for stock. We commence to ship the last of March or first of April, according to the season.

HOW TO SEND MONEY. By Chicago or New York draft, Express Money Order, Postoffice Money Order or Registered Letter

Do not send checks on country banks as there will be exchange to pay which will be charged to buyer.

All inquiries cheerfully answered.

If more than one catalogue should be received, please hand to some neighbor and oblige.

AS WE have numerous inquiries all of the time as to best varieties to set for profit, both for market and home use, and asking where they can procure the best berry book, etc., we will say right here that the best all around berry book we have seen is "The Biggle Berry Book," just issued. It is a neat, cloth bound, illustrated, condensed treatise on small fruits of over 150 pages. An interesting feature of the book is the colored plates of many of the different berries prominent before fruit growers today. The original cost of the plates for the first edition was \$1000. The cuts are not overdrawn and hardly do some varieties justice. The most instructive feature of the book (in our estimation) is the answers to the twenty questions received by berry experts from all sections of the United States giving their views on the various subjects connected with berry culture. The book can be obtained from the publishers Farm Journal, Philadelphia, Pa. Price 50 cents. We will give the book as a premium for a \$10 order at our catalogue price, or the book can be ordered of us at regular price.

STRAWBERRIES.

THE STRAWBERRY IS OUR SPECIALTY. We have the largest stock that we have ever grown, having many of the standard varieties by the 100,000. While the extreme drouth of the past season cut the plant crop short in many sections of the country our crop is a good average one; and having about 20 acres set to strawberries, for plants, (most all new setting) we have much the largest stock of all of the best old and new varieties to be found in Michigan. Almost all of the newer varieties we obtained from the originators and introducers in the first place at a heavy expense, consequently our stock is pure.

WE ARE often asked what varieties we find most profitable for market. Last year the Parker Earle, Warfield and Lovett in the order named paid us best. In answer to the question in The Biggle Berry Book—"name the five most profitable varieties for market," thirty berry men from all sections of the country name over forty varieties. The *favorites* are the following in the order named: Bubach, Warfield, Haverland, Lovett, Parker Earle, Crescent, Greenville and Beder Wood. We have a fine stock of *all* the above and a new beginner *cannot* go far out of the way in getting these varieties.

SOIL FOR STRAWBERRIES. Almost any soil that will grow good field crops will grow strawberries—good, rich, well-drained sandy loam preferred. For general field culture, plant rows from three and one-half to four feet apart—plants from one and one-half to two feet

apart in the row, according to habit of the plant. Plant every fourth row to a staminate variety,

NEWLY cleared land is good for strawberries. We make a practice of clearing up several acres of new land and setting to strawberries every year and while the labor of tending is more than on old run out land the plants produced are the best and most healthy grown. Growing plants in such large quantities we can, of course, make a discount on large bills. Thus nurseries in all sections of the country buy of us to sell again—many times selling through agents as high by the 100 as we charge by the 1,000. Many, we find, have great faith in getting *high-priced* stock from some large nursery. If the nursery from whom they buy is reliable—careful to buy pure stock—well and good; but we find some nurseries care less for pure stock and more for low prices.

—————VARIETIES:—————

MICHEL'S EARLY (S.) One of the earliest varieties grown, the plant is a very robust grower, strong and healthy, although plant is rather small; one of the best of the early fertilizers, as it blossoms early and late. Fruit is of medium size and good quality. Some growers that can grow *very early* berries make much money on this variety alone. It again did well for us last year; it is profitable the second year; have a large stock of this variety and place the price very low. 25c per dozen; 40c per hundred; \$2 per thousand.

CRESCENT Improved (P.) The standard of productiveness all over the country; succeeds everywhere, stands neglect best of any plant small, berries fair size, bright and attractive, not very firm. Many growers still consider this the most profitable berry for market. A few years ago a new berry was introduced into this section which proved to be an *improved Crescent*. We again sold more plants of this variety last year than any other except Warfield. We have a large stock of extra fine plants and quote them 25c per dozen; 40c per hundred; \$2 per thousand.

WARFIELD (P.) This is a grand berry and has worked its way right to the front without the boom given to some varieties. We sold more of this variety than of any other last year. The plants are small, much resembling Crescent; but berry is much firmer, of a dark, glossy red, very tough skin, larger than Wilson, an enormous bearer and splendid shipper; nearly as early with us as Crescent and makes plants equally as fast; one of the very best of the newer, well-tested sorts. This variety requires to be fertilized about every third row, for best results. We have an enormous stock of this variety and place the price very low. 25c per dozen; 50c per hundred; \$2.25 per thousand.

HAVERLAND (P.) Exceedingly productive, fruit large and very fine but rather soft for a distant market; one of the most popular of the new well-tested varieties; withstands the drought better than most kinds; color rather light, season early. 25c per dozen; 50c per hundred; \$3 per thousand.

EDGAR QUEEN (P.) (New.) A strong, healthy growing variety, of the Sharpless type but more productive. Fruit large, uniform, good quality, moderately firm, very desirable, season medium, was first introduced in 1890. We obtained our stock of the originator in 1891 and have fruited it three years, and are much pleased with it, 40c per dozen; 60c per hundred; \$4 per thousand.

WILSON (S.) Too well-known to need description—once the most popular variety in the country. Very firm, a good shipper and fertilizer. We have a large stock. 25c per dozen; 50c per hundred; \$2.75 per thousand.

EUREKA (P.) This is a very beautiful large crimson berry, strong, healthy foliage. ripens late. This is one of the best late market strawberries. Yields large crops, flesh firm, a good shipper, plants are good runners. 25c per dozen; 50c per hundred; \$3 per thousand.

GANDY (S.) This is one of the leading late varieties with fruit growers all over the country. The plant is a strong grower, fruit large and firm but does not yield very heavy; requires strong soil and fertilizers to do its best, but being very late is very profitable on that account. 25c per dozen; 50c per hundred; \$3 per thousand.

BURT (S.) Very productive, good shipper, good fertilizer for late varieties, foliage a glossy green, season late, fruit fair size and quality. 25c per dozen; 60c per hundred; \$3 per thousand.

LOUISE (S.) Its large size and attractive appearance renders this a very desirable berry; quality good, produces well. 25c per dozen; 50c per hundred; \$2.75 per thousand.

JESSIE (S.) This berry has had a big boom, does not seem to be adapted to all kinds of soil, is after the Sharpless type, being a seedling of that berry. It is a splendid fertilizer, good quality and good color, does extra well in some sections but with me it is not a heavy cropper and tender like Sharpless. 25c per dozen; 50c per hundred; \$2.75 per thousand.

SHARPLESS (S.) One of the old well-known varieties adapted to clay or moist soil. Very large and of good quality, but blossoms are tender and liable to kill with spring frosts; a good fertilizer. It pays to protect its blossoms in spring by a mulch. 25c per dozen; 50c per hundred; \$2.75 per thousand.

BUBACH (P.) This is a great favorite all over the country. The plant is very large and fine looking but a slow plant maker. The berry large and showy but poor color; does not stand drought as well as some. I have a *much larger stock* this year than ever before. 25c per dozen; 50c per hundred; \$3.25 per thousand.

PARKER EARLE (S.) This berry still takes the lead for productiveness. Plant very robust, strong and healthy; endures extremes of heat and cold; roots very long, berry regular, conical, medium size, glossy crimson with short neck; flesh firm, seeds prominent, *good shipper*, season late. While recommended for *light soil* we have always grown it on *rich, moist* ground with the best of results.

The Michigan Experimental Station has for years placed it at the head of the list. E. W. Reid says: "I find it the best berry on our farm." Our stock of plants were received direct from the introducer four years ago. We have an extra large and fine stock of plants for the spring of '95 and have reduced the price to 40c per dozen; 75c per hundred; \$4.50 per thousand.

BEDER WOOD (S.) This is a comparatively new variety, originated by Beder Wood, of Illinois. We have fruited it two years and found it to be a very *heavy* bearer, of good sized roundish fruit (about as firm as Bubach) season early, a good staminate to fertilize early varieties like Crescent and Warfield. We could not supply the demand for plants last year; this year we have an immense stock and have put the price very low. New York Experimental Station says: "The Beder Wood the most productive variety here this season." M. Crawford says in his strawberry report: "This berry, all things considered, is the very best berry that has ever fruited with me. The plant is a good healthy grower and sends out a large number of runners." 25c per dozen; 50c per hundred; \$3 per thousand.

LOVETT'S (S.) Introduced by the J. T. Lovett Co. three years ago. We have fruited it two years and while it is not as early as claimed we consider it one of the very best of the staminates. It bears an immense crop of good sized, *firm* and good colored berries; plants are beautiful dark green, and glossy; splendid runner; splendid fertilizer for Crescent and Warfield. We find it well-spoken of all over the country. 25c per dozen; 50c per hundred; \$2.75 per thousand.

ENHANCE (S.) The berries are large like Sharpless but firmer. The plants are strong, healthy growers; season late. Well spoken of by growers all over the country. Should have good soil. 40c per dozen; 50c per hundred \$3 per thousand.

BARTON'S ECLIPSE (P.) (New.) A seedling of Longfellow. I have fruited this two years and am very much pleased with it; is very profitable and a heavy bearer. The fruit is of good size and nearly always of good form. Will endure a good deal of handling, having a firm skin and slight neck; good color and a good runner. 40c per dozen; 60c per hundred; \$4 per thousand.

SANDOVAL (S.) This was introduced as Warfield No 1. A well tried variety, has been fruited seven years. It is a perfect blossom, full of pollen. Plant heavily rooted with an abundance of fruit stems well loaded with berries. Season early—it rusts some with us. 30c per dozen; 60c per hundred; \$4 per thousand.

LEADER (S.) (New.) Introduced in 1892, by a firm in Massachusetts, at \$2 per dozen and \$10 per hundred. Was awarded three prizes by the Massachusetts Horticultural Society. It is of large size, firm, beautiful form, colors all at once—no green noses, early, good fertilizer for Bubach. etc. 40c per dozen; 75c per hundred; \$4.50 per thousand.

VAN DEMAN (S.) This is the new *very early* perfect flowering

variety, claimed to be the only berry ever introduced on the verdict of the Experimental Stations alone, it having been on trial in all Stations all over the country. Thier verdict seems to be almost universally favorable. It is a seedling of Crescent crossed with Capt. Jack. We bought fifty plants three years ago for \$8. Very promising.. 50c dozen; 75c per hundred; \$8 per thousand.

GREENVILLE (P.) The Greenville strawberry is an accidental seedling found on the fruit farm of E. M. Buechly, of Greenville, Ohio, in the spring of '83. It fruited so successfully the first season after starting that he propagated it in a small way and tried it further. After a fair trial it was found so valuable that he has for the past few years, planted more of it than all other sorts together. Berries of large size, good quality, medium texture, very productive, season medium, color very even and fine, flower pistillate, plants very vigorous and free from rust, much resembles Bubach, but is *firmer* and some smaller but a better plant maker, making a more solid fruiting row.

This variety was introduced in '93. I bought 1000 of the plants of the introducer, paying him \$50. I have a splendid stock of these plants which I list as follows: 30c per dozen; 50c per hundred; \$3.75 per thousand.

SMITH'S SEEDLING (S.) This is a new staminate variety introduced two years ago. I bought a good stock of the plants and fruited them last year. Berries are large, dark, nearly round and heavy bearers. The plant is a good healthy runner. The skin is not as tough as we like for shipping, will not bear as much handling as some. Splendid for home use, or near market. Good flavor. Season late. 30c per dozen; 60c per hundred; \$4 per thousand.

COXCOMB (S.) This is a large rank growing plant, much resembling Sharpless but larger berries; a splendid fertilizer for late pistillates; a good yielder, berries quite uneven, firm for for so large a berry, a great favorite in this section. 40c per dozen; \$1 per hundred; \$4 per thousand.

GOV. HOARD (S.) The plant is strong and healthy, free from rust and very productive; the blossom is perfect and the fruit ripens quite early; berries large, roundish, conical, slightly flattened and usually necked; color deep brilliant red. The flesh is firm and of a rich, agreeable flavor; splendid fertilizer. 30c per dozen; 60c per hundred; \$3.75 per thousand.

SAUNDER'S (S.) Originated by John Little, of Canada. This has been tested in many localities and found to be a valuable market berry. A good grower and heavy bearer. Fruit large, conical, dark, glossy red, quality good, season medium. 40c per dozen; 75c per hundred; \$5 per thousand.

PRINCESS (P.) Originated in Minnesota. M. Crawford says: "It is one of the most desirable market berries ever produced, large size, round, attractive looking and abundant bearer. No one is likely to make a mistake in planting it." We have fruited it and like it. 40c per dozen; 75c per hundred; \$5 per thousand.

DEW (S.) Originated near Lansing, Mich. Fruited with us last year. A wonderful berry, early. The plant is strong with large foliage of a very dark green. Fruit large and very firm, of a dark, glossy red, perfect in shape, should be planted by all that can grow berries and want the largest that can be grown. 50c per dozen; \$1 per hundred.

BEAVERLY (S.) Another new berry of great promise. Originated in Massachusetts; is a seedling of Miner's Prolific. Season medium to late, bears a long time, holds out well to the last, large size, regular form, often a little uneven on the surface, dark, glossy red, flesh firm and good. No bad reports from this berry. 40c per dozen; 80c per hundred; \$3.75 per thousand.

IOWA BEAUTY OR CHILDS (S.) (New.) The right name for this is Iowa Beauty, as it originated in Iowa. In growth of plant it resembles Jessie; it is said to be one of the largest, handsomest and best berries yet introduced. I am told by reliable men who have grown it in Iowa that it does much better than Jessie on prairie soil as well as timber soil, and it is No. 1 in all respects. 25c per dozen; 60c per hundred; \$4 per thousand.

WOOLVERTON (S.) This originated with John Little, of Canada, and has been tested in many localities and wherever tried has given satisfaction. It is healthy and hardy, a strong grower, makes plenty of plants, bears a large crop of very large berries, resembling Bubach in form, but bright red in color, and good quality, moderately firm. Season late. 30c per dozen; 75c per hundred; \$4 per thousand.

CUMBERLAND (S.) Large, fine form and good flavor. 25c per dozen; 50c per hundred; \$3 per thousand.

DAYTON (S.) A new variety that is highly praised in Montgomery county, Ohio, where it is well and favorably known. It is a fine large berry, of dark, crimson color, firm, of handsome form and excellent quality. The plant is a healthy and vigorous grower, with large, clean foliage. It is very promising and said to possess unusual shipping qualities. It is among the best of the large, newer sorts, and we can recommend this variety as one that will give satisfactory returns in the shape of handsome fruit if given fair treatment. Season early. We have not fruited it yet but we have a fine stock of plants that are very thrifty. 30c per dozen; 50c per hundred; \$3.75 per thousand.

ROBINSON (S.) Originator's description: "The Robinson strawberry originated by planting seed from a Crescent, which was fertilized by pollen from Charles Downing, therefore it is a cross of Crescent and Downing, and it possesses all the merits of both parents without the faults of either."

In habit the plant resembles the Crescent of spreading compactly over the ground, but its foliage is a darker green. Its fruit is larger than the Crescent -blossom a strong staminate, more than equalling the Captain Jack in pollenizing properties. It is a week later than Crescent, but continues in bearing as long as the latest varieties, and

it will produce more well developed berries than the Crescent, while the fruit is larger and of a superior quality. 30c per dozen; 60c per hundred; \$3.75 per thousand.

CYCLONE (S.) Last spring we purchased a stock of plants of this variety from the originator, E. W. Cruise, of Kansas. M. Crawford says: "This is a healthy luxuriant grower and a good bearer. The fruit is conical, glossy red, of good quality, and of good size." Early. 50c per dozen; \$1.25 per hundred; \$8 per thousand.

AROMA (S.) M. Crawford says: "Companion of the Cyclone, and the better of the two for my soil. The plant shows no weakness of any kind. The fruit is very large, roundish, conical, rarely mishapen, glossy red, of excellent quality, and produced in abundance. 50c per dozen; \$1.25 per hundred; \$8 per thousand.

BISEL (P.) From southern Illinois, where it has a great reputation as a profitable market berry. Having heard so much of the variety, I was anxious to see how it would behave here. The plant shows no weakness of any kind, but is well able to carry its great load of fruit to maturity. The berries are very large, of regular conical form, bright red, quite firm, with seeds but slightly imbedded, flesh is light red and of good flavor—From Crawford's July report. Last spring I purchased 1000 plants of the originator, Mr. Bisel, Chicago Market reports quote the Bisel at a premium, ripens with Crescent but continues longer in bearing. 40c per dozen; \$1.25 per hundred; \$9 per thousand.

BELLE (S.) This is a large, long shaped berry originated by M. T. Thompson, of Ohio. It is very late, some specimens weighing an ounce and from many reports very productive. We grew a small stock of the plants last year and have placed the price at 50c per dozen; \$1.50 per hundred; \$10 per thousand.

THE PRINCETON CHIEF (S.) Originator's description: "After having carefully tested the Princeton Chief side by side with leading varieties for six years, we unhesitatingly pronounce the Chief one of the most delicious, sweet-flavored and finest looking berries out. We have such confidence in the Chief that we make the offer of \$5 for a single plant, payable to any one who will send us a variety that shall *surpass the Chief*.

The Chief is a rank grower, with a large dark green foliage leaf; stalks long and erect and free from rust.

The Chief is a great plant producer; single plants produced from 40 to 50 plants from July 20th to Sept. 20th, in 1892.

Has an abundance of long roots that go deep into the soil, thus enduring extremes of heat and cold, and never suffers in dry seasons, making it vigorous and hardy.

Will grow on any soil, rich or poor; heavy clay or light black soil will do for the Chief.

The fruit is large and of good shape; color is a dark glossy red, with a dark red flesh, and very firm. Quality excellent, delicious and very sweet.

The berries are covered with a large, dark green calyx, or hull, giving them a fine attractive appearance, and protecting the berries in shipping.

The fruit is produced in large clusters, on tall, stout stems, which stand erect the entire season. This causes the fruit to become much sweeter and firmer.

Does not rot, as the berries are kept from the ground, making them firm, while the glossy, sugar-like coating on the Chief's berries protects them from rotting; but after being ripe a number of days will dry up on the vines.

The Chief can be picked the day before and have them ready for the early morning train. This way the Chief has been shipped from 800 to 1200 miles and reached its destination in good condition, and in conclusion will say, that if there is a better berry than the Princeton Chief, let us have it, even if they cost at the rate of \$60 a dozen, for the best always pays. My stock is from the originator. 50c per dozen; \$1.50 per hundred; \$10 per thousand.

TIMBRELL (P.) So much has been said and written about the Timbrell, the new late berry, that it is useless to take up time with testimonials from all over the country as to its value. Two years ago I tried to get a stock from the introducer but was too late. Last year I bought of him 2000 plants at the wholesale price of \$100. This year I have a good stock of plants. We find that it is not a heavy runner—about like Bubach with us. Rural New Yorker, a good authority, says: "If confined to but one berry it would be the Timbrell." M. Crawford, whom we quote heretofore in preference to introducers, who is undoubtedly the best authority on the strawberry in the United States, recommends it very highly. 75c per dozen; \$2.25 per hundred; \$15 per thousand.

SHIRTS (P.) A new variety originated in this State. I have not fruited it and it has not been boomed like some. Said to be a good bearer like Crescent, but firmer, season medium. I offer them very low and think it may pay all to try some of them. 25c per dozen; 50c per hundred; \$3.75 per thousand.

MUSKINGHAM (S.) A new variety well recommended. I have a small stock of plants of this variety. Have not fruited it. E. W. Reid says: "As productive of quarts as Crescent. Nice red, glossy color, large size, good bloom. 40c per dozen; 80c per hundred.

BRANDYWINE This new strawberry will be introduced this coming spring by M. Crawford at \$1 per dozen; \$5 per hundred. I bought a good stock of the plants last fall and will fill orders at same price. M. Crawford says: "While the Brandywine has proven a success with me in every way I have considered it preferable to give the statements of others than of myself. Those who are quoted are distinguished parties of such standing in the horticultural world that their words carry great weight."

The following extracts from the Rural New Yorker consists of

notes taken on the experimental farm of that paper on the dates named.

In the issue of July 16, 1892:

June 15.—Brandywine, of immense size and fine quality, quite firm and shapely for so large a berry. Foliage of the largest and thriftiest, entirely free of scald or blemish. Heavy peduncles. The *average* size is as large as any ever raised and the shape is more uniformly good than that of any other of the largest varieties. In general it is heart-shape, often broadly so without neck. Its most pronounced irregularity inclines toward a Sharpless shape, occasionally as of two berries joined together. Calyx and sepals broad and many. Medium red, flesh red, firm and solid for so large a berry—none more so. Quality not the best, but fully as good as Sharpless, and better than Bubach Vines exceedingly prolific. The best berry in our collection of this season up to date. Brandywine continues a long time in fruit, and is of superior shape, quality and size for so large a berry. Foliage perfect.

June 19.—Brandywine still bearing many large berries of regular shape and good quality. It is a fine variety.

June 26.—Brandywine still bearing.

The two new berries which we would specially commend to our readers are Brandywine and Timbrell. Both are abundant bearers, healthy and vigorous vines. Of the two, Brandywine will perhaps please the market best, because the berry ripens in every part uniformly, while the Timbrell colors unevenly. If we allowed ourselves to form positive conclusions from a single season's trial and were desirous of setting out a new bed for home use, we would plant, of all the varieties in our present collection, the Timbrell and the Brandywine; and if confined to but one of the two, we would choose the Timbrell on account of its excellent quality.

In the issue of July 29, 1893:

Brandywine is wonderfully productive, and beginning to ripen. June 11.] The size is of the largest, heart shape at its best; often sharply angular, without being coxcombed or crinkled. A fine keeper and shipper. Quality excellent, though not best.

June 21.—Brandywine is the best late berry we know of. Good shape, good quality, firm and productive.

A. L. Smith, of Spokane, Wash., says: "I have grown it two years in adjoining rows to Timbrell. Timbrell has been deservedly very highly praised but Brandywine is much the better berry for market, of almost the same season. Perfect, healthy foliage, a very fine variety in every way.

R. M. Kellogg, a prominent fruit grower of Ionia, Mich., is enthusiastic in its praise. The Michigan Experimental Station also recommends it very highly. \$1 per dozen; \$5 per hundred.

BRUNETTE (S.) Originated by G. Cowing, of Muncie, Ind. Will be introduced in the spring of '95. This variety in its combination of delicious flavor and beauty has probably taken a step in advance of

any variety now generally cultivated. Its berries are of a dark red color, round and almost invariably perfect; color without any white tip, but firm, flower perfect, a strong grower and as free from rust as any variety now cultivated. Prof. J. Troop, of the Indiana Experimental Station, has placed it at the head of all varieties at that Station for delicious flavor. He also furnished the following voluntary notice of it which was published in the *Indiana Farmer*, of Oct. 20, 1894: "The Brunette strawberry has been tested three years. It is not yet for sale in the market, but undoubtedly will be in another spring, when it should find a place in every farmer's garden. It is a good grower and productive. The berry is large and dark red, and of the very best quality. It is especially desirable for home use or home market." Prof. W. J. Green, of the Ohio Experimental Station after testing it three years, expressed the following opinion of it in a letter to its originator: "The Brunette has done finely for us this season. It is the finest berry for home use with which I am acquainted." In the strawberry bulletin from the Michigan Agricultural College for '93 Prof. Taft says: "Fruit large, round, conical, regular, very dark crimson color, seeds sunken, flesh dark, productiveness 8; quality 9-5; firmness 9; berry very attractive in appearance and the plants strong and healthy." \$1 per dozen; \$5 per hundred.

MARSHALL (S.) M. Crawford says: "I was very anxious to see the fruit of this variety after hearing so much in its favor and paying \$10 for a dozen of the plants. It was the first very large variety to ripen, and I think every berry came to maturity. It is of great size and very beautiful. With a quart containing 19 perfect specimens I captured the prize for the "best quart" at the great Millersburg show. It was nearly as fine at our Summit county exhibition the next week. It is scarcely ever misshapen, and the color is a rich, glossy red that everyone must admire. The quality is far above the average, and I see no reason why it will not become a great favorite as soon as its merits become known. The plant is faultless. I could not suggest a single improvement in it. While ripening its fruit it sent out a large number of strong runners which remained unrooted for a long time, for want of rain. Still the plants are as green as grass, and not a spot of rust on them. The blossom is perfect, and each one is followed by a berry. As to its productiveness, it will not yield as large a number of berries, as some varieties, but when measured in quarts or bushels it will, in my opinion, be rather above than below the average." I bought 100 plants last spring for \$16.50 and have quite a stock which I offer at \$1 per dozen; \$4.50 per hundred.

SPLENDID. M. Crawford says: "I have fruited it twice and can offer it to my customers with great confidence. The plant is a healthy, luxuriant grower, sends out many runners, and bears abundantly. The fruit is large and far above the average in quality and appearance. It is desirable for either market or home use." I bought a small stock from the introducer last year. 75c per dozen; \$2.25 per hundred.

Varieties marked P are "Pistillate," and should have about every fourth row set to some staminate variety for a fertilizer. Those marked S are "Staminate," and good fertilizers. Set early staminates with early pistillates and late with late, etc.

Six at dozen, 50 at 100 and 500 at 1000 rates. At dozen rates we pay the postage. At 100 rates to go by mail add 25c to each hundred; at 100 and 1000 rates to go by express or freight, charges are to be paid by purchaser. It costs no more to pay on receipt of goods than on shipment, but I have to guarantee all charges. When ordering please state how you wish your plants sent. When not stated I use my best judgment for your interests, and generally hit it. Those ordering early receive a discount. Do not wait till the busy season as many orders cannot be filled in full then as some varieties will be exhausted. *Order now.*

EARLY ORDERS FOR STRAWBERRIES.

As it is a great saving in expense to many purchasers to have their strawberry plants shipped by freight, instead of express, we would recommend *ordering early*, and if the ground is not in condition to plant when they arrive—too wet or not prepared—a very easy method can be used to keep them, which will be a great benefit to the plants, as follows: Take each variety, a bunch at a time, cut string and spread roots very thinly along the side of a shallow furrow, then cover roots with dirt, not higher than the crown of the plants. Give partial shade and if ground is dry water the roots only. In a few days they will have taken hold, or rather sent out little white fibrous roots, and will be in better condition for transplanting than at first. This method is sometimes recommended for strawberries even when ground is in condition or could be ready to plant when they arrive. So do not wait until late in the season when the strawberries have started to grow, and then have them shipped by freight, as after they have started to grow it is not as safe to send by freight.

RASPBERRIES.

CUTHBERT (Red.) This is the leading late market variety all over the country, strong grower, very productive, fruit firm, large size and of good quality; season medium to late. 35c per dozen; 75c per hundred; \$4.50 per thousand; 5,000 or more in one lot \$4 per thousand.

HANSELL (Red.) One of the earliest red raspberries, very profitable on this account, berries good size, attractive color, and firm, canes rather small but very hardy and very productive, tough healthy foliage. 35c per dozen; 75c per hundred; \$4 per thousand.

GREGG (Cap.) This is the very best of the late black caps, very large, wants good soil to produce best results, fruit very fine and covered with bloom. It is the leading market variety, best for evaporating of any variety as it is said to give most pounds to the bushel of any kind. 35c per dozen; 80c per hundred; \$5.75 per thousand.

FOUHEGAN (Cap.) One of the best known early sorts. It ripens its entire crop in a very short time, canes hardy with healthy foliage, very productive, berries jet black and of good quality, firm, good shipper. 35c per dozen; 75c per hundred; \$5.75 per thousand.

PALMER (Cap.) This is the new black cap that has come to the front as the best early black yet ever introduced. Was introduced in 1880. It is undoubtedly the most desirable early variety before the public. It is a luxuriant grower, healthy, hardy and *wonderfully prolific*. One of the earliest to ripen and matures its whole crop in a short time. The berries are jet black and of good quality. I have fruited it two years and find it very profitable. Our stock is very fine. 50c per dozen; \$1 per hundred; \$7 per thousand.

OLDER (Cap.) Two years ago I received from the introducer a fine stock of this *new, well-tested* variety and now have a fine lot of plants. The demand last year was very heavy for plants. We could fill pages with testimonials from growers but will quote but two or three.

Mr. McGehon, of Iowa, says: "They yield 50 per cent. more than any other berry on my ground."

Prof. Budd, of Iowa Agricultural Station, says: "They are the best cap berry ever tried on our ground and are the best to can."

J. T. Lovett says; "They are distinct from all other blackcaps, in bush and fruit; are very large, coal black, smallest seeds, will endure more cold, stand more drought, and fruit does not dry on vines."

75c per dozen; \$1.25 per hundred; \$10 per thousand.

SHAFFER'S Colossal (Red.) An immense raspberry in both cane and fruit, equally adapted to the north or south. Enormously productive. Berries are large, of a purplish color, but luscious and rich, best for home use grown.

Although classed with the reds it does not sucker like them; grows from the tips the same as black caps. 75c per dozen; \$1 per hundred; \$8 per thousand.

MUSKINGUM. Ohio Experimental Station says: "A new variety much resembling Shaffer but plants are smaller and more compact, and fruit is somewhat smaller but firmer." 75c per dozen; \$1 per hundred.

GOLDEN QUEEN. Is evidently a close relation to the Cuthbert; it has stood the winter very well, and fruited for six weeks. The canes made a fine growth. In size is like the Cuthbert, and is wonderfully productive, exceeds the blacks. Its beautiful, translucent color attracts the eye of those who want the best. 50c per dozen; \$1 per hundred.

SMITH'S PROLIFIC. A new and valuable black; is very firm and productive. Profitable for evaporating, and comes at a very desirable time, just before Ohio. Has a remarkably strong growth, stands up well, and is one of the very best, so recommended; not fruited with us yet. 75c per dozen; \$1.25 per hundred.

PROGRESS (Cap.) A superior early variety from New Jersey; has been tested thoroughly in the east and is taking the place of all

other varieties for first crop. Size second only to Gregg; very firm standing bad weather and long shipments best of all; excellent flavor, very hardy, strong grower, immensely productive. We have small stock. 75c per dozen; \$1 per hundred.

KANSAS (Cap.) This new variety seems to be the general favorite with growers all over the country. E. W. Reid writes us: "It is the best berry on our farm."

J. T. Lovett says: "The Kansas raspberry again did remarkably well with us this year. We know of nothing better, in fact none so good in the way of black raspberries. It possesses more good qualities and is without exception, in our opinion, the best black raspberry in cultivation to-day."

Described as follows: Ripens just after Souhegan; berries large as Gregg, jet black, firm, handsome, and of the best quality; bush a strong grower, holds its foliage until frost; stands drouth and cold, very productive.

The general price of stock last year was \$3 per hundred. We have a fair quantity of stock and have placed the price at \$1 per dozen; \$2 per hundred; \$15 per thousand.

Six at dozen, 50 at 100 and 500 at 1,000 rates. At dozen rates we pay postage. At hundred and thousand rates, by express or freight, charges to be paid by purchaser.

BLACKBERRIES.

SNYDER. Very popular for the north and northwest, on account of its extreme hardiness; wonderfully productive, size medium, fruit juicy and sweet, without the hard core of many sorts, canes remarkably strong and thrifty, more largely planted than any other of the iron-clad varieties. We have a heavy demand for them every year; season early. 50c per doz; \$1 per hundred; \$7 per thousand.

KITTATINNY. Unexcelled for main crop. Berries large, handsome and of delicious flavor, canes strong, erect and very productive, season medium, needs some protection in the extreme north, more grown in this section than all others combined. 50c per dozen; \$1 per hundred; \$5.50 per thousand.

TAYLOR'S PROLIFIC. Nearly hardy as "Snyder," with berries larger and of fine quality, sweet and juicy, canes of strong growth, of especial value for planting at the north, suited to low moist ground, canes are greenish yellow. 50c per dozen; \$1 per hundred.

EARLY HARVEST. One of the earliest blackberries in cultivation, a compact dwarf grower, fruit rather small and of good quality, heavy bearer. Its extreme earliness makes it a very profitable variety; not hardy. Has to be laid down. Blossoms stood the spring freeze of 1894 best of all. 50c per dozen; \$1 per hundred; \$5 per thousand.

WILSON'S EARLY. One of the very largest and most productive of the early sort, produces fruit in large clusters, sweet as soon as

black, holds its color well after picking, needs protection at the north. 50c per dozen; \$1 per hundred; \$7 per thousand.

LAWTON. Too well known to need description, old and reliable, productive, season late. 50c per dozen; \$1 per hundred; \$6.50 per thousand.

ERIE. (New.) Resembles "Lawton" in form and productiveness, but ripens earlier and is "iron-clad," fruit shined jet black, delicious flavor, demand exceeds the supply all over the country every year. 75c per dozen; \$1.75 per hundred.

MINNEWASKI (New.) Large, productive and quite hardy; fruit round and of very good quality; bush a rank grower; desirable for market or home use, (root cuttings.) 75c per dozen; \$2.25 per hundred.

ELDORADO. Was introduced last spring. It is said to be as hardy as Snyder, berry much larger and of best quality. Has been cultivated twelve years and never winter killed. H. E. VanDeman, National Pomologist, says: "Never have I tasted anything to equal Eldorado." Having purchased a stock of plants of the introducer I offer it at his prices, viz. 30c each; \$2 per dozen; \$15 per hundred.

Six at dozen, 50 at 100 and 500 at 1,000 rates. At dozen rates we pay postage; at hundred and thousand rates, by express or freight, charges to be paid by purchaser.

CURRENTS.

VICTORIA. We have a few thousand fine one-year old plants of this vigorous late variety that is coming more to the front every year. It is now considered the most valuable of any of the older sorts. Is not affected by the borer like some of the others. 50c per dozen; \$2.25 per hundred; \$20 per thousand. Also some medium 2 year-olds, 60c per dozen; \$2.75 per hundred.

SEED POTATOES.

Owing to the great increase in our plant trade we have discontinued the seed potato branch and only offer for the coming season a few barrels of the famous Freeman potato—without doubt the most famous potato in the United States today. T. B. Terry, the best potato authority in the United States, pronounces the Freeman the greatest potato ever introduced. He grew over 300 bushels from one barrel of seed. It was introduced by Wm. Henry Maute, of Philadelphia, Pa. Pages could be filled in its favor. Owing to the very severe drouth early potatoes were very small, consequently our Freeman, while ripe, are small, (preferred for seed by many.) We put the price *very low*. 50c per peck; 75c per $\frac{1}{2}$ bushel; \$1.25 per bushel; \$3.25 per barrel. We have some smaller size, called second size, good for seed, at 60c per $\frac{1}{2}$ bushel; \$1 per bushel; \$2.50 per barrel. Barrel holds 165 pounds. Packages free.

GRAPE VINES.

While we have not an extensive variety of grapevines we have an extra fine stock of the two most popular varieties in the country.

CONCORD. A large purplish black grape, ripening about the middle of September; vines remarkably vigorous and free from disease; the standard for productiveness and hardiness all over the country. One year No. 1, 60c per dozen; \$1.50 per hundred; \$14 per thousand; two year No. 1, 75c per dozen; \$2 per hundred; \$18 per thousand.

WORDEN. An improved Concord, being larger in both bunch and berry, handsomer, and nearly two weeks earlier and better quality. As it is difficult to grow, many vines of Concord are sold for it. One year, No. 1, 75c per dozen; \$2.25 per hundred; \$20 per thousand.

A WORD TO PATRONS.

When writing, *please sign your name plainly*. We can guess at anything else better than your name. Also be sure to give your Postoffice, County and State. Every year we receive letters with either Postoffice or State left off—many times orders with no signature. Use the *order sheet* and fill out carefully and much trouble will be avoided.

REFERENCES: To our standing and reliability we refer to the Postmaster, Express Agent or any merchant in Bridgman; Chas. H. Whitcomb, Sheriff, and Joel H. Gillette, Register of Deeds of Berrien county, St. Joseph, and Leonard J. Merchant, editor and proprietor of the St. Joseph SATURDAY HERALD.

O. A. E. BALDWIN,

BRIDGMAN, Berrien County, Michigan.

FRUIT PACKAGES.

As we have numerous enquiries as to *best place* to buy fruit packages, we insert the card of Wells-Higman Co., the leading manufacturers of the country. They do an immense business, on business principles. Heretofore we have referred our customers to them all *unknown* to the W. H. Co.

UNSOLICITED TESTIMONIALS.

1894.

Davenport, Iowa, May 1, 1894. Dear Sir—Do not want any better plants than you sent me. (10,000), and if I did could not get them, even if made to order. Respectfully
H. H. HOLMES.

Davenport, Iowa, Dec. 5, 1894. Letter received, I do not expect to wait till catalogue is published. I will probably want.
* * * * I never bought better plants than those I got of you, and never better packing except from that prince of strawberry growers Mathew Crawford. May he live long in the land, for small quantities or number of new varieties he has no equal that I know of.
H. H. HOLMES.

Marion Co., Ind., March 31, 1894. Received the plants today by freight. They were in first-class order, and are good plants. May 12th, Received the crescent plants the 4th in splendid condition. Many thanks for good plants, and liberal count. I believe my whole order was \$123.12.
JERRY GRAY.

Rockford, Ill. Please find enclosed draft for plants. The reason I send to you is I understand your plants always come true to name.
L. B. FULLER.

La Crosse, Wis. All of the first lot of 22,000 by freight are coming along first rate. I set 10,000 myself, my brother-in-law the balance. His are looking fine.
GEORGE HOSMER.

State Public School, Coldwater, Mich. The plants arrived early in April in good order. The plants were good and are all planted and nearly all are growing. A. N. WOODRUFF, Supt.

Dayton, Ohio, April 6. Plants came all right. Cold as the weather was—eight days on the road—thermometer 12 above zero, but when opened they were in splendid condition. You can beat us in raising plants. I never saw such roots as some varieties had. Please send me 3,000 more of Warfield and 1,000 Sharpless by freight at once.
GEORGE F. MUMMA.

Minnesota City, Minn., Jan. 1, 1894. I received from you last year Warfield, Parker Earle and Beder Wood strawberry plants. The plants came in fine order during a violent snow storm and though my ground was ready I was delayed ten days in planting; and though we had a severe drouth all summer the plants made a splendid growth, except a few Parker Earle. O. M. LORD.

Foxcraft, Me. March 19. Last year I received from you 600 Parker Earle and Lovett strawberry plants—long rooted, well-packed. All lived and grew grandly. You know your business.
J. F. NORRIS.

Chickasaw Co., Iowa. Your plants are perfection, and your packing is of the best.
GEORGE W. STOCKS.

Council Bluffs, Iowa, May 8. The plants you sent me are doing well considering the dry weather we are having. They were extra good plants.
L. O. WILLIAMS.

Marion Co., Ind., April 13. Please express at once 2,000 more Parker Earle. We have handled this year quite a large quantity of plants, receiving them from a number of the best growers in the country, yet as far as plants are concerned yours have shown up well with the others.
ALBERTSON & HOBBS.

Milford, Mich. The stock I received from you two years ago has done the best of any—so reported by customers.

E. R. DUNLAP.

Trempealeau Co., Wis. The plants received O. K., fine. You will hear from me again when I want plants.

C. A. SHERWOOD.

Harden Co., Iowa. The plants received by freight in splendid condition. They are the finest we have had this year. I enclose you a small order to come by express. Be sure and send catalogue next spring as we think we can send you several orders.

C. L. FURRY.

Moline, Ill. Cuthbert raspberry plants received today in excellent order. Good stock and believe they were so packed that they would have stood a three weeks' trip.

W. C. WILSON.

Bridewater, S. D. Plants came the 26th ult., were in good order and were particularly fine and well rooted.

J. A. PARRISH.

Monroe City, Mo. After being on the road ten days, the strawberry plants arrived in fine condition. They are all that could be desired, being strong and well-rooted. I am well pleased with them.

J. A. BIXLER.

Aldershatt, Ontario. Catalogue received. Was glad to get it, although I do not know as I will want anything this year. The plants received from you last year were very satisfactory in every respect; the packing was fine; did not lose as many plants from you as some I got near home and your prices are the best.

W. A. EMORY.

Erie Co., Pa., Jan. 23. Am glad you are getting good orders. Such plants as you ship deserve credit. Please add to my order * * * * April 25th—plants received by freight the 21st. All were in good condition except Warfield. Plants received from Ohio were small—not such plants as you send me by a considerable.

C. E. LLOYD.

La Grange, Ky. Those plants received from you last year were splendid.

E. H. TUCKER.

New Canaan, Conn., April 4th. The plants came safely after being on the road two and one-half weeks. They are in good order and very nice. I think them very large and fine.

DAVID M. AVERY.

North Collins, N. Y., April 9th. Strawberries came through nicely and are splendid. Thanks. May 10th—The strawberries received from you could not be beat and always came in good condition.

EUGENE WILLETT.

Leavenworth, Kan. The strawberries and blackberries arrived on the 7th in good order and I must say they are the finest plants I ever received from any one.

E. W. CRUISE.

Lopez, Wash. Plants came yesterday and are in the ground. As nearly as I can judge they were on the road thirty days. A few roots around the bottom were frozen; otherwise they were in first-class condition.

J. M. C. WARREN.

Patterson, N. J. Plants arrived in good condition. Am perfectly satisfied.

JAS. FARRAR.

Johnson Co., Neb, March 17th. Enclosed find draft for 2,500 Parker Earle to be sent by freight. Your stock is always nice.
A. GAISER & CO.

Henry Co., Iowa. I received plants last year from four different nursery men and yours was as large as two of the others put together. They were the best plants I ever bought.
MRS. CARRIE SHECKLER.

Kenosha Co., Wis. The plants (21,000) arrived by freight in good condition. They are good stock.
J. F. SWARTZ & CO.

Savannah, Mo. Plants received in good condition.

R. VANBUSKIRK & SON.

Van Buren Co., Mich. We wish to set out two acres of strawberries. We bought plants of you three years ago and found them A No. 1.
S. F. KIPP.

LaPorte Co., Ind. Your plants are far better than those received from the east and are packed safer.
A. W. FURNESS.

Knox Co., Ohio. I received in good shape today two barrels and four boxes of plants. * * * * I have been highly pleased with your dealings with me.
E. R. LEEDY.

Madison Co., Ill. The plants came in fine condition. My neighbor, Mr. Kennedy and Dr. Sharp, will send you an order today. They are strawberry men and have always got plants from Centralia. I told them of my implicit faith in your giving them what they ordered, that the plants would come in good condition and that they would receive good treatment generally from you. Oct. 6th—Dr. Sharp and Mr. Kennedy greatly pleased with plants you sent them and as I was the cause of their orders am well pleased myself.
G. S. ROBBINS.

Madison Co., Ill., Aug. 13th. I received a bill of strawberry plants the last of April with Dr. W. W. Sharp and I wish to say that they were the finest lot of plants that has ever been shipped to this place. I set out 3,000 of them, 2,000 Crescent and 1,000 Lovetts. They are standing the dry hot weather extremely well.
L. T. KENNEDY.

Polk Co., Iowa. The 10,000 strawberry plants came in good shape. A few of the first ones were frozen but you sent me sufficient plants to make them all right. I went to one of your old customers, before I sent my order, and he said you were always perfectly square and honorable in all your deal and sent your stock in good shape.
M. MARKLY.

Champaign, Ill., Sept. 1st. Our experience in the past has always been that small fruit plants secured of fruit growers were much more reliable than the average nursery grown plant.

CHAMPAIGN NURSERY CO.

Minneapolis, Minn. I send you an order for plants. One of your neighbors offers plants some cheaper but I bought plants of you last year that grew and did well, so I patronize you.
WM. LYONS.
